

■ PROFILE

Frontend engineer with deep expertise in TypeScript, JavaScript, and React — I think in systems: clear data flows, scalable component architecture, and interfaces that hold together under real complexity. Over five years I have designed and owned complete production frontends, from the first architectural decision to the moment something ships. I communicate clearly, work hard, and genuinely enjoy learning new technologies and putting them into practice. That mindset led me early into AI engineering — building LLM integrations, developing AI agents, and implementing MCP-based workflows in production products. My experience spans Web3 platforms, fintech, and enterprise publishing systems.

■ PROFESSIONAL EXPERIENCE

O-dev

Aug 2024 – May 2026

Senior Frontend Developer

- Designed and owned the complete frontend architecture of two production platforms — defining folder structure, state management patterns, API service layers, custom hook conventions, and component systems — enabling fast iteration and consistent quality across the full codebase.
- Built both platforms from scratch using React, Vite, and TypeScript: a financial liquidity platform (GVNR) and a collateralised lending platform (Diamond Hands), taking each from blank repository to live production.
- Developed complex financial dashboards and data-heavy interfaces including loan management flows, multi-step user journeys, real-time analytics, transaction history views, and live financial charts.
- Implemented complex third-party service integrations and multi-provider authentication flows, handling secure connectivity, real-time data synchronisation, and cross-service state management.
- Integrated multiple data sources including Firebase and GraphQL APIs, enabling live dashboard analytics and seamless frontend-backend communication.
- Collaborated with product, design, and backend teams, owning major features from architecture through deployment and ongoing production maintenance.

Kontainer

May 2024 – Sep 2024 (Contract)

Frontend Developer

- Built CMS-backed web applications using Vue.js and Nuxt 3, developing reusable UI component libraries and integrating dynamic CMS content into responsive, production-ready interfaces.
- Led the frontend migration from Nuxt 1 to Nuxt 3, refactoring legacy components, modernising outdated patterns, and resolving compatibility issues throughout the upgrade.
- Optimised frontend performance through code splitting, lazy loading, and asset optimisation, increasing the Lighthouse score from 20 to 80+ and reducing page load time by 40%.

Optimum Partners

Feb 2024 – Jun 2024

Frontend Developer

- Contributed to Forbes' enterprise editorial CMS — a high-traffic production system — using Angular, TypeScript, Material UI, HTML5, SCSS, and REST APIs, delivering reusable components and scalable frontend modules for editorial and publishing teams.
- Refactored and optimised legacy frontend features, resolving complex UI issues and ensuring consistent performance across all modern browsers and devices.
- Collaborated with US-based stakeholders and cross-functional Agile teams across product, design, backend, and QA, participating in sprint ceremonies, demos, and production delivery.

Solicy

Sep 2021 – Feb 2024

Full Stack Developer

- Led full-stack development of scalable fintech and trading platforms, delivering end-to-end solutions using React, Vue.js, Next.js, Node.js, NestJS, and TypeScript.
- Built high-performance user interfaces for fintech and trading platforms, developing reusable component libraries, complex dashboards, real-time data visualisations, and user-focused application flows.

- Designed and maintained secure RESTful APIs with JWT authentication, role-based access control, and backend integrations for production-grade financial applications.
- Integrated third-party financial data APIs including OpenAI, Alpha Vantage, and Yahoo Finance, enabling AI-powered automation, document generation, and real-time market data features.
- Developed real-time financial data visualisation features including live asset tracking, interactive charts, and analytics dashboards.
- Built an animation-heavy interactive application using Pixi.js and canvas-based rendering, delivering smooth, high-performance UI elements at 60fps.

Freelance

Sep 2020 – Sep 2021

Freelance Frontend Developer

- Built responsive, reusable UI components for 5+ client projects, translating Figma mockups into production-ready code using React, JavaScript, HTML5, CSS3, Tailwind CSS, and Bootstrap.
- Implemented mobile-first responsive designs with CSS Grid and Flexbox, ensuring consistent cross-browser compatibility and pixel-perfect UI delivery.

■ SKILLS

Core	React · TypeScript · JavaScript · Next.js · HTML5 · CSS3 · Redux · Zustand
Frontend	Vue.js · Angular · Tailwind CSS · SCSS / Sass · Vite · Pixi.js · Figma · Responsive Design
Backend & APIs	Node.js · NestJS · Express.js · REST APIs · GraphQL · Firebase
Testing	Jest · Playwright · React Testing Library
AI Tooling	Claude Agent SDK · Claude Code · Model Context Protocol (MCP) · LLM Integration
Tools & Infra	Git · AWS (S3, Lambda) · GCP · Agile / Scrum

■ CERTIFICATIONS

[Claude Certified Architect — Foundations](#)

Anthropic

[Claude Agent SDK in TypeScript](#)

CodeSignal

[Claude Code in Action](#)
